

HOW TO IMPORT AN XML-FILE OF A MATERIAL DATASET INTO WUFI®

In WUFI® you can import/ export material datasets created for the simulation with WUFI® as an xml-file additional to the materials in the WUFI® database and store them in your user-defined material database.

Include an xml-File in the WUFI® database (WUFI Pro 6)

- 1 Open WUFI®
- 2 Menu: DATABASE → MATERIALS, the window shown below will open
- 3 Highlight the folder „User defined“ or one of its subfolder (if exists) where you like to insert the material (A)
- 4 Click the IMPORT -button (B)
- 5 The product now is stored in the database and can be used in your assemblies.

Open an xml-file in an assembly (WUFI Pro 5 and newer version)

- 1 Open WUFI®
- 2 COMPONENT → ASSEMBLY/MONITOR POSITIONS
- 3 Select/ insert the layer which shall contain the material and assign any material from the database
- 4 Double click on this layer
- 5 Click on the lock (A) to unlock the material, which enables editing
- 6 Click IMPORT (B) then chose the desired xml-file. The existing material will be replaced with the opened one.
